# SEED POTATOES

GROWN BY

GEO. J. KELLOGG & SONS.

JANESVILLE, ROCK CO., WIS.

---

A CHANGE OF SEED ALWAYS PAYS.

---

WE have a good stock now in store true to name and very fine. All orders acknowledged as soon as received, and potatoes shipped as soon as danger of freezing is over, but we assume no responsibility for damage incurred in transit. All potatoes are well packed in barrels without extra charge. Order early as potatoes can then be packed for shipment before the hurry of spring and stock is then more complete than later

when many varieties may be sold out. With late orders much delay would be prevented if a second choice of varieties be made, or allow us to substitute some variety equally as good in place of those ordered. But we never substitute unless permission is given. Don't plant your old worn out seed, get something new and of strong vitality, and then give them good care and at digging time you will not regret it.

**SIX WEEKS MARKET.** This popular variety is one of the best of the Ohio type. Strong vigorous grower, very productive, good quality, ripens a week to ten days earlier than Ohio.

**ACME.** Introduced by J. C. Vaughan in 1894 as the "earliest and most productive potato in cultivation." It belongs to the Ohio class, and has all the good qualities common to them. Ripens with the Six Weeks, but is larger size and more productive. We can recommend it as an extra early market variety.

**OHIO JUNIOR.** Extra early; oblong or round; color, similar to Ohio; quality equal to the best. A strong grower and a good yielder.

**EARLY MARKET.** This might be called an Early Ohio of new blood. Tubers of large size and first quality. Ripens with Ohio. One of the best.

**IRISH COBBLER.** This variety is distinct from any potato in cultivation. Round and sometimes flattened, skin creamy white, somewhat netted which indicates their fine quality. The vine is a strong grower and stands the dry weather much better than most varieties. Ripens about with Ohio, but is more productive. A fine variety.

**EARLY OHIO.** This standard variety need no description. Grown everywhere as a market sort.

**SOMERSET.** Introduced by the Jerrard Co. in 1895. Round and somewhat flattened; skin flesh color, finely netted. An early variety of extra table quality. Yield good.

**EARLY HARVEST.** This is the best early white potato in cultivation. Oval or oblong, sometimes flattened. Tubers of good size and of the best quality. Season same as Ohio. In yield it ranks with the best.

**EARLY FORTUNE.** Oval or oblong, light flesh color, tubers medium size, very smooth and of fine quality. In

season about the same as Hebron but far ahead of that variety in productiveness.

**EARLY NORTHER.** Oblong, skin light rose color; tubers, of good size and of the first quality. "This variety originated in Maine and is regarded as one of the very best early potatoes."

**SIGNAL.** This is one of the best early varieties. The skin is a light flesh color; shape oblong, slightly flattened, smooth with full eyes. The vines are strong and vigorous; yielding a good crop of medium sized tubers of first quality.

**VAUGHAN.** An early variety of the Hebron style. Oval, light flesh color; good quality. Vines vigorous and productive.

**NEW QUEEN.** Early, good quality, fair size; similar to Hebron, in shape and color.

**BURPEE'S EXTRA EARLY.** Oval or round, skin nearly white; tubers, of medium size and fine quality. Yield fair.

**WISCONSIN BEAUTY.** A second early white potato of fair size and good quality. Yields well.

**ARIZONA.** This variety will take the place of the Early Rose, and as it is of new blood will give better satisfaction. The vine is a strong grower and a good yielder.

**FREEMAN.** A white potato of medium size and first quality. "It sets a good many tubers which will run small unless planted on good soil. Good for family use but will not pay as a market variety.

**WORLD'S FAIR.** Round, slightly flattened, skin white, smooth with full eyes. Tubers of medium size and of very fine quality. Yield fair. Season medium late.

**COLUMBUS.** New. Oblong, light flesh color, eyes pink, quality good, one of the best yielders last year.

## RURAL NEW YORKER No. 2.

This late variety is one of the best in cultivation, will produce a paying crop when many others fail. Oblong or round, skin and flesh white, eyes few and even with the surface; quality excellent. Tubers of uniform size nearly all being marketable. Yield immense.

**CARMAN No. 1.** Originated by E. S. Carman, Editor of the Rural New Yorker. Shape oblong; skin white; finely netted; "a remarkably handsome potato of extra table quality." The vines are strong and vigorous "and the yield something wonderful," surpassing in this respect Rural New Yorker No. 2. Don't fail to include this variety in your order.

**CARMAN No. 3.** This new late potato introduced last year was also originated by Mr. Carman, and is a good companion for his No. 1. The vine resembles Rural No. 2, is an extra strong grower, remaining green till frost. Tubers, oblong or round, of large size, and very fine quality; "skin and flesh of extreme whiteness." "Without any exception it is the greatest yielder ever introduced." The best late variety of recent introduction. We have grown this variety one season and consider it equal, if not superior, to any in cultivation. As the seed is limited the price is rather high but it will pay to get a start now, as it is in great demand and bound to become very popular.

**MAGGIE MURPHY.** An excellent main crop variety of the Rose class. A remarkably strong grower and very free from disease or blight. Very productive, tubers large to very large with few small ones. Quality good. Eyes rather deep which is its only fault.

**IRISH DAISY.** This new variety was introduced in 1894. Oblong, skin nearly white. In yield it is among the best, single hills often producing 10 to 15 tubers of marketable size. The vine is a strong grower and not affected by blight, quality rather poor.

**ORPHAN.** Introduced by C. E. Chapman of New York and described by him as follows: "A late, long, white variety, heaviest yielder, fine quality, upright vigorous vines, green till frost." This is probably the best of the Burbank type.

**CLARK'S SEEDLING.** New. A late variety of strong upright growth. Tubers round of a russety color, flesh white and of good quality, yield very large. A good market sort.

**GREAT DIVIDE.** Introduced by Burpee. This variety is very similar to Burbanks in shape and color. Tubers of medium size and of fine quality. The vine is a strong grower and sets a large number of tubers, rather more than it can mature.

**PARKER'S MARKET.** This new potato was introduced last year by the Jerrard Co. A very large yielder of good sized, flesh colored potatoes of fair quality. Season late.

**DELAWARE.** Oblong or round, skin and flesh white, tubers of large size and first quality. The vine is a strong grower and very productive. Season medium late.

**KOSHKONONG.** Oblong, or round and slightly flattened; medium to large size with few small potatoes. Flesh white and of good quality.

**DUTTON'S SEEDLING.** Oblong; cream white; medium to large size; short vigorous vines; quality fair; yield good.

**GREEN MOUNTAIN.** Improved. White, good size, large yielder.

**ALBANY.** NEW. Red, good size, very late.

**SIR. WILLIAM.** Oblong, white, good quality, productive.

**American Wonder.** Long, white, irregular shaped, medium size, quality good, yield fair.

**Stray Beauty.** Round, red, very early.

Special prices on large orders. Correspondence solicited.

**TERMS:** Cash with the order. Of some varieties we have only a small stock, and these prices hold good, only so long as our present stock remains unsold.

\*Of these varieties we can furnish on early orders, second size potatoes at 5c per peck, 20c per bushel, and 50c per barrel less than list price. By seconds we mean potatoes about the size of hen's eggs, but no small worthless trash. On orders for second size if stock is sold, we reserve the right to fill with first size to the amount of money sent; unless otherwise stated in the order.
